

Migration

Individuals and Societies (History geography and social sciences)

Statement of Inquiry questions (e.g., *"How do power dynamics shape historical narratives?"*). They learn to connect academic content to real-world context and reflect regularly on their own learning strategies through ATL logs.

Interdisciplinary Units (IDUs), mapping content directly to the required IB criteria and global contexts.

Early years (MYP 1–2, ages 11–13) focus on foundational ATL skills and interdisciplinary exploration.

- **Student-teacher:** Dylan Schlepers
- **Mentor-teacher:** Haike Tattjes
- **Date:** September 10, 2026
- **School (+ curriculum):** International School Amsterdam (IB MYP Framework)
- **Class level (grade, age):** MYP 2 (Ages 12–13)
- **No. students:** 24
- **Length of the lesson:** 45 minutes
- **Topic/content:** Migration (Push and Pull Factors) | Individuals & Societies
- **Materials:** Projector, whiteboards/markers for groups, printed primary/secondary source cards (4 sets), migration scenario worksheets, digital exit ticket link or sticky notes.
- **Learning Aims:**
 - **Knowledge/Understanding:** Students will identify and categorize push and pull factors driving human migration.
 - **Skills:** Students will analyze personal case studies/scenarios to infer motivations behind historical and contemporary movement (Individuals & Societies Criterion D: Thinking critically).
 - **Global Context:** Orientation in Space and Time (human journeys, transitions, and cause-and-effect).
- **Prior knowledge, attitudes, skills:**
 - Basic understanding of global geography and maps.
 - Familiarity with collaborative group work and source analysis in MYP 1/2.
- **How to check students' progress towards the learning aims in this lesson?**
 - Formative monitoring during group sorting activity.
 - Peer presentation/justification of selected scenarios.
 - Individual Exit Ticket assessing the ability to distinguish push vs. pull factors.

Part 2: Lesson Plan

TIME	CONTENT	ACTIVITIES	MOTIVATION
00–05	Hook & Framing Introduction to the concept of movement	Teacher: Displays a brief, compelling visual (a photo of a suitcase alongside a world map) and asks: <i>"If you had to move to another country tomorrow, what would force you out, and what would attract you there?"</i>	Activates prior knowledge and personal empathy while introducing core concepts (Push vs. Pull) organically before defining terms.

	and human relocation.	Students: Think-Pair-Share brief answers with a partner.	
05–15	Instruction & Conceptual Framework Key Concepts: Push Factors (negative conditions driving people away) vs. Pull Factors (positive conditions drawing people in).	Teacher: Facilitates a brief mini-lesson defining push and pull factors within the MYP Individuals & Societies framework. Maps examples on the board (e.g., conflict vs. safety, economic hardship vs. job opportunities). Students: Note key terms and contribute examples to the class concept map.	Short, direct instruction keeps 12–13-year-old learners engaged while establishing clear academic language required for Criterion A (Knowing and understanding).
15–32	Interactive Group Activity Analyzing Migration Scenarios (Push vs. Pull Analysis).	Teacher: Divides the 24 students into 6 groups of 4. Hands out a set of 4 short primary/secondary scenario cards (e.g., an Irish farmer during the Great Famine, a modern tech worker moving to Amsterdam, a refugee fleeing conflict). Students: In groups, read scenarios, identify the migrants' motivations, and physically sort them onto a poster grid divided into <i>Push Factors</i> and <i>Pull Factors</i>.	Cooperative learning promotes peer interaction and critical thinking (Criterion D). Physical sorting accommodates kinesthetic learners and maintains high engagement.

		Each group prepares to justify one scenario to the class.	
32–40	Synthesis & Class Discussion Debriefing complexity: Are factors always clear-cut?	Teacher: Calls on groups to share their classification of one scenario. Challenges students: <i>"Can a migration journey have both push and pull factors operating at the same time?"</i> Students: Present group findings and discuss how economic, political, and environmental factors overlap.	Encourages higher-order thinking by moving beyond basic classification to analyzing real-world complexity in human movement.
40–45	Evaluation & Closure Formative assessment exit check.	Teacher: Distributes the exit ticket prompt. Students: Complete an individual 2-minute Exit Ticket: Write one original example of a push factor and one pull factor, and state how they influence a migrant's choice.	Provides immediate evidence of student mastery against the learning aims to inform the next lesson's entry point.

Part 3: Lesson Evaluation

- **Were the learning aims achieved by all/most/some students? What evidence do you have to answer this question with certainty?**
 - (To be completed post-lesson based on Exit Ticket data and group activity observation).
- **What went well?**
 - (To be completed post-lesson).
- **What didn't go well?**
 - (To be completed post-lesson).
- **What will you do differently in the next lesson(s)?**
 - (To be completed post-lesson).
